XP12232D **LCD MODULE USER MANUAL**

1. FUNCTIONS & FEATURES

Features

- Dot Matrix: 122×32 Dots
- LCD Mode: STN
- Controller IC: SED1520 or Equivalent
- Driving Method: 1/32 Duty; 1/9 Bias
- Viewing Angle: 6 O'clock direction
- 6800 serial 8-Bit MPU Interface
- Backlight: LED
- Operating Temperature Range: -20 to 70°C;
- Storage Temperature Range : -30 to 80°C;

Note: Color tone is slightly changed by temperature and driving voltage.

9. FUNCTION SPECIFICATIONS

9.1. Basic Setting

To drive the LCD module correctly and provide normally display, please use the following setting:

- Select duty=1/32;
- ADC=1;
- Display start line=0;
- LCD display=ON;
- READ-MODIFY-WRITE=OFF.

Note:

- These setting/commands should issue to both controllers while start up;
- See the Display control instructions section for details.

9.2. Adjusting The LCD Display Contrast

广州鑫平电子科技有限公司

A Variable-Resistor must be connected to the LCD module for providing a reference to V0. The recommended value of the Variable-Resistor is 20K to 50K.

9.3. Resetting The LCD Module

The LCD module should be initialized by setting /RST terminal at low level when turning the power. Keep /RST terminal at high level, during power on. After the power supply is stable, a hardware reset signal should supply to the /RST terminal. The LCD module will be initialized at the rising and falling edge of /RST signal. For normal running, /RST signal must be kept at high level.

1*. Only one section(driver) could be read at the same time.

2*. For the details of the display control instructions, please refer to SBN1661G datasheet.

10. DESIGN AND HANDLING PRECAUTION

10.1. The LCD panel is made by glass. Any mechanical shock (eg. Dropping from high place) will damage the LCD module. Do not add excessive force on the surface of the display, which may cause the Display color change abnormally.

10.2. The polarizer on the LCD is easily get scratched. If possible, do not remove the LCD protective film until the last step of installation.

10.3. Never attempt to disassemble or rework the LCD module.

10.4. Only Clean the LCD with Isopropyl Alcohol or Ethyl Alcohol. Other solvents (eg. water) may damage the LCD.

10.5. When mounting the LCD module, make sure that it is free from twisting, warping and distortion.

广州鑫平电子科技有限公司

- 10.6. Ensure to provide enough space(with cushion) between case and LCD panel to prevent external force adding on it, or it may cause damage to the LCD or degrade the display result
- 10.7. Only hold the LCD module by its side. Never hold LCD module by add force on the heat seal or TAB.
- 10.8. Never add force to component of the LCD module. It may cause invisible damage or degrade of the reliability.
- 10.9. LCD module could be easily damaged by static electricity. Be careful to maintain an optimum anti-static work environment to protect the LCD module.
- 10.10. When peeling of the protective film form LCD, static charge may cause abnormal display pattern. It is normal and will resume to normal in a short while.
- 10.11. Take care and prevent get hurt by the LCD panel edge.
- 10.12. Never operate the LCD module exceed the absolute maximum ratings.
- 10.13. Keep the signal line as short as possible to prevent noisy signal applying to LCD module.
- 10.14. Never apply signal to the LCD module without power supply.
- 10.15. IC chip (eg. TAB or COG) is sensitive to the light. Strong lighting environment could possibly cause malfunction. Light sealing structure casing is recommend.
- 10.16. LCD module reliability may be reduced by temperature shock.
- 10.17. When storing the LCD module, avoid exposure to the direct sunlight, high humidity, high temperature or low temperature. They may damage or degrade the LCD module
